THREAT RESEARCHER | THREAT HUNTER | MALWARE ANALYSIS & REVERSE ENGINEERING | THREAT INTELLIGENCE | AI-ASSISTED SECURITY AUTOMATION

Threat Researcher and **Threat Hunter** with **6+ years of cybersecurity experience** across **BFSI** and **MSSP** environments, specializing in **threat intelligence**, adversary **TTP analysis**, **hypothesis-driven** threat hunting, **malware analysis**, **reverse engineering**, and detection engineering. Experienced in researching emerging threats, **APT** and malware campaigns, translating adversary behavior into **MITRE ATT&CK-mapped** intelligence, and developing **YARA/Sigma** detections across **SIEM** and **EDR** environments. Hands-on experience with **static and dynamic malware analysis**, **sandbox-based triage**, IOC investigation, and **security research** using tools including Ghidra, IDA Pro, Capa, PESTudio, REMnux, ProcMon and YARA. Also experienced in developing **AI-assisted cybersecurity automation** using **Python**, **LLMs (Claude)**, **prompt engineering** and **AI agents** to automate IOC extraction, threat summarization, hypothesis generation, MITRE mapping and detection engineering workflows.

CORE COMPETENCIES

Threat Research & Intelligence: Adversary Research, Threat Intelligence Analysis, IOC Analysis, TTP Analysis, APT & Malware Campaign Analysis, MITRE ATT&CK

Malware Analysis & Reverse Engineering: Static & Dynamic Analysis, PE Analysis, Sandbox Analysis, Behavioral Analysis, YARA, Capa, Ghidra, IDA Pro

Threat Hunting & Detection Engineering: Hypothesis-Driven Hunting, PEAK, TaHiTi, SPL, Sigma, Detection Gap Analysis, SIEM/EDR Investigation

Incident Response & Security Operations: Incident Investigation, Forensic Analysis, Log Analysis, Lateral Movement Detection, Phishing & C2 Analysis

Network & Endpoint Security: Network Traffic Analysis, IDS/IPS, Zeek, Suricata, Wireshark, CrowdStrike, Cortex XDR

AI / GenAI Security Automation: LLMs, Generative AI, Prompt Engineering, AI Agents, AI-Assisted Threat Hunting, Python Automation, FastAPI

TECHNICAL SKILLS

Programming & Scripting: Python, C, C++, SQL, x86 Assembly

Threat Research & Intelligence: MITRE ATT&CK, Recorded Future, Intel471, Google Threat Intelligence, SOC Prime, Cyware, MISP, VirusTotal, Shodan, Censys

Malware Analysis & Reverse Engineering: Ghidra, IDA Pro, OllyDbg, Capa, PESTudio, PE-tree, CFF Explorer, Oletools, REMnux, ProcMon, Process Hacker, Regshot, Any.Run, Hybrid Analysis

Detection Engineering: YARA, Sigma, Splunk SPL, MITRE ATT&CK Navigator, CAR

SIEM / EDR: Splunk, Securonix, CrowdStrike, Palo Alto Cortex XDR, LogRhythm, AlienVault USM, Wazuh, OSSEC

Cloud Security / Red & Blue Team: Azure, Microsoft Entra ID, Microsoft 365, Microsoft Graph, Microsoft Sentinel, Azure RBAC, Conditional Access, Azure App Services, Azure VMs, Azure Storage, Identity Attack Paths, Token Abuse, Purple Teaming

Cloud Security Tools: ROADtools, AzureHound, TokenTactics

Network Security: Wireshark, Zeek, Suricata, Nmap, Metasploit, Burp Suite

Frameworks & Methodologies: MITRE ATT&CK, PEAK, TaHiTi, NIST, OWASP Top 10, CAR, STRIDE

AI / GenAI: LLMs, Generative AI, Prompt Engineering, AI Agents, AI-Assisted Threat Hunting, LLM-based Security Automation

WORK EXPERIENCE

Threat Hunter SME - Banking & Financial Services (BFSI)

Persistent Systems (third party payroll via Evanti Tech) - Pune(On - Site)

July 2025 - Present

Threat Hunter SME supports threat research and proactive detection across a **BFSI environment**, focusing on **hypothesis-driven** and **TTP-based** threat hunting, **emerging threat analysis**, threat intelligence and **detection-gap** identification. Responsible for operationalizing intelligence-led hunts, executive threat reporting, process **development** and **AI-assisted threat-hunting automation**.

Key Responsibilities:

- Conducted **hypothesis-driven**, **TTP-based** and ad-hoc threat hunts using **MITRE ATT&CK** and the **TaHiTi framework**, covering adversary behaviors across **Initial Access**, **Persistence**, **Execution**, **Lateral Movement** and **Command & Control**.
- Researched and investigated emerging threats, **APT activity**, malware/phishing campaigns and **supply-chain** attack scenarios, translating adversary behaviors into **targeted hunting hypotheses** and **detection opportunities**.
- Executed **Intel471** hunt packages and **threat-intelligence-driven** investigations to identify malicious activity, validate adversary **TTPs** and **uncover detection** and **telemetry gaps** across the security environment.
- Analyzed **SIEM**, **EDR** and threat-intelligence telemetry to identify detection gaps and collaborated with **Security Engineering** and relevant stakeholders to drive remediation and **improve hunt coverage**.
- Designed and **optimized Splunk SPL & CrowdStrike queries** and **summary indexes/#event_simpleName** to support repeatable and automated **threat-hunting workflows**.
- Developed AI-assisted threat-hunting automation using **Python and LLMs (Claude)**, automating activities such as IOC extraction, threat summarization, **hypothesis generation**, MITRE ATT&CK mapping and **detection-engineering workflows**.
- Created and maintained threat-hunting processes, SOPs, knowledge documentation and operational guidelines, supporting repeatability and standardization of hunting activities.
- Produced and presented **weekly executive reports**, **monthly hunt metrics**, **SteerCo** updates and **quarterly threat-hunting reports**, communicating emerging threats, hunt outcomes, detection gaps and remediation status to stakeholders.

Sr. Threat Hunter - Banking & Financial Services (BFSI)

[LTI Mindtree](#) (third party payroll via KBC Technologies) - Mumbai (On - Site)

Nov 2024 - July 2025

Supported proactive threat hunting and detection engineering for a banking environment, applying MITRE ATT&CK, PEAK and threat-intelligence-driven methodologies to identify adversary behavior, detection gaps and emerging threats. Collaborated with Threat Intelligence and security teams to convert intelligence and hunt findings into actionable detection content and management reporting.

Key Responsibilities:

- o Developed and **optimized SOC Prime Sigma** detection rules for advanced threat and **APT-related** behaviors, reducing false positives by **20%**.
- o Conducted **proactive hypothesis-driven threat hunts** across MITRE ATT&CK tactics including Initial Access, Execution, Persistence and Command & Control.
- o Applied the **PEAK threat-hunting** methodology to formulate, execute and document **intelligence-driven** hunting hypotheses.
- o Leveraged **Recorded Future** to research **emerging threats**, **adversary TTPs** and threat intelligence relevant to the **BFSI environment**.
- o Analyzed structured and unstructured **security telemetry to identify IOCs, malicious behavior** patterns and **SIEM/EDR** detection gaps.
- o Tracked evolving adversary TTPs and translated threat-intelligence findings into actionable hunting hypotheses and detection content.
- o Collaborated with Threat Intelligence teams to produce weekly threat reports and advisories, mapping adversary behaviors to MITRE ATT&CK.
- o Aligned intelligence-driven hunting outcomes with detection engineering and remediation activities to improve coverage across critical threat vectors.

Sr. Security Analyst, [Suma Soft Pvt. Ltd.](#) - Pune

Jul 2021 – Nov 2024

Worked within an MSSP environment supporting 24x7 SOC operations, proactive threat hunting, incident investigation and security monitoring across client environments. Developed hands-on expertise in malware analysis, reverse engineering, threat intelligence, detection engineering, network analysis and security validation.

Key Responsibilities:

- o **Managed 24x7 SOC operations** and proactively hunted nation-state and financially motivated threats, improving incident response efficiency by **30%** through proactive investigation and response processes.
- o Conducted in-depth static and dynamic malware analysis, behavioral analysis and reverse engineering using sandbox environments to identify malicious artifacts, execution behavior, attack techniques and support remediation.
- o Performed proactive threat hunting and adversary TTP analysis, correlating threat intelligence, malware activity and security telemetry to support incident investigation, mitigation and vulnerability assessment.
- o Deployed and configured AlienVault SIEM (Appliance & USM Anywhere) for centralized log analysis and threat detection, and created YARA and Sigma rules to proactively detect malicious files, behaviors and network activity.
- o Captured and analyzed network telemetry using Zeek and Suricata, investigating suspicious communications and anomalies through network and signature-based analysis; performed SPF/DKIM email-header analysis to identify phishing activity.
- o Led Breach & Attack Simulation (Cymulate) and implemented Virsec Zero-Day threat prevention to validate security controls, identify detection gaps and improve protection against exploitation.
- o Integrated VAPT and security tools across internal and client infrastructure, supporting vulnerability assessment, security hardening and overall security posture improvement.

Security Analyst, [Psytech Digi Pvt. Ltd.](#) - Pune

Dec 2019 – June 2021

Supported security monitoring, vulnerability assessment and network-security operations while developing foundational experience in security incident investigation and defensive security controls.

Key Responsibilities:

- o Monitored security events and investigated potential network-security breaches across critical infrastructure.
- o Performed vulnerability assessments and supported remediation of identified security weaknesses.
- o Deployed and configured open-source security tools to improve network visibility and threat detection.
- o Documented security incidents and supported investigation and response activities.

AWARDS & RECOGNITION

Spot Award — Semicolon Hackathon: Recognized for contributions to the team's AI-driven cybersecurity innovation initiative during the Semicolon Hackathon.

CERTIFICATION

MCRTF - Microsoft Cloud Red Team Professional (**PWNED LABS**)

E|CIH - Certified Incident Handler (**EC-Council**)

LRPA|LRPA - Certified LogRhythm Platform Administrator (**LogRhythm**) | Certified LogRhythm Security Analyst (**LogRhythm**)

CCHP - Cymulate Cyber Hygiene Pro (**RangeForce**)

CCSVP - Cymulate Continuous Security Validation Pro (**RangeForce**)

AI & LLM: Claude (Certified), Prompt Engineering, AI Agents

PRO BONO WORK

Security Operations Center (SOC) & Malware Analyst (Visiting Faculty),

June 2024 – July 2025

- Delivered hands-on training in SOC operations, SIEM functionality, static/dynamic malware analysis and reverse engineering.
- Provided practical cybersecurity training and guidance to aspiring security professionals.

SECURITY RESEARCH & AI PROJECTS

ThreatHunt AI – LLM Powered Threat Hunting Assistant

Technologies: Python, FastAPI, Claude, LLMs, Splunk, Sigma, YARA, MITRE ATT&CK, Docker, Streamlit

- **Designed and developed an LLM-powered Threat Hunting Assistant** using Python and Claude to automate IOC extraction, enrichment, reputation validation, severity scoring, threat summarization and investigation workflows from unstructured threat intelligence reports and PDF advisories.
- **Generated platform-specific detection content** including Splunk SPL, Sigma rules, YARA rules and threat-hunting queries, incorporating MITRE ATT&CK mapping and automated hypothesis generation.
- **Integrated with Splunk** to automatically execute generated hunting queries, retrieve matching events in JSON format and validate findings through automated investigation workflows.
- **Reduced manual threat-hunting and detection-engineering effort** by automating repetitive investigation, intelligence processing and detection-generation activities.

Malware Sandbox Automation

Technologies: Python, Docker, YARA, PEStudio, Capa, Ghidra, VirusTotal

- **Developed a lightweight automated malware-analysis and triage workflow** for static analysis, including malware metadata, imports, strings, entropy analysis, packer detection, file hashes and suspicious artifact extraction.
- **Integrated YARA scanning and IOC extraction** to automate malware triage and identify potentially malicious files and artifacts.
- **Built an internal IOC correlation database** to track malware artifacts across analysis sessions and support **campaign identification and investigation**.
- **Generated structured malware-analysis reports** incorporating threat scoring and investigation recommendations to support analyst-led malware research.

T-Pot Honeypot Threat Intelligence Platform

Technologies: T-Pot, Docker, Python, ELK, Threat Intelligence

- **Deployed and managed T-Pot honeypot infrastructure** to collect real-world attack telemetry and automate IOC extraction from honeypot logs using Python.
- **Correlated attacker infrastructure, IPs, domains and payloads** to enrich threat intelligence datasets and identify emerging attack patterns.
- **Validated AI-generated threat-hunting detections against honeypot telemetry**, using real-world attack data to improve detection coverage and support threat research.

EDUCATION

PG DITISS | IT Infrastructure & Security (CDAC-Acts, Pune | 2019)

Bachelor of Engineering (B.E.) | Computer Technology (Nagpur University, India | 2018)
